

# POCKET TYPE NOBBING MACHINE

## Application

Pocket type fish nobbing machine is widely used for processing fresh or defrosted fish.

Pocket type fish nobbing machine is most flexible way how to process sardines, mackerel, herring, anchovie and other pelagic fishes.

Produce HG or fillets, pocket type nobbing/filleting is adaptable for the product you desire. With few adjustments change product type. Modular design enables step by step integration. Start with simpler products and end up with full automatic line.

## Main benefits

- Clean cuts without damaging the fish
- Laser fish measurement system
- Automatic cut place adjustment
- Servomotor
- High yield
- Easy maintenance and cleaning

## Pocket type nobbing machine

## Operating principle

The product can be inserted into pockets with either manual operator infeed or automatic feeding unit. To maintain optimal productivity, all pockets must be filled before entering the cutting section.

Laser measurment system adjust cutting place in order to accieve highest possible yield.

Upon the modification of machine multiple products can be produced.

## Technical characteristics

<b>Productivity</b>	Up to 350 pockets per minute
<b>Pocket width</b>	30 mm; 50 mm
<b>Lenght of ready product</b>	Adjustable
<b>Number of operators</b>	1 - 4
<b>Water consumption</b>	8 l/min
<b>Machinery power</b>	1 kW
<b>Vacuum pump power</b>	7.5 kW

## Possible options

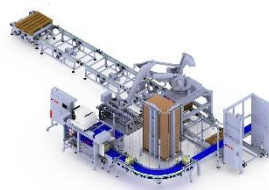

## For more processing solutions

### Robot packer line

Save your workforce and space expenses!

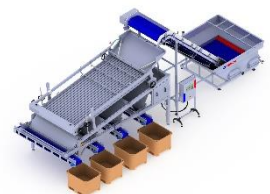

### Full layer palletizer line

Prepare palette within just 3 minutes!

### Water defrosting line

Use efficient defrosting for your products!

### Roller grading line

Grading - a must for industrial processing of fish!
