

# PALLET DISPENSER

## Application

The pallet dispenser is designed to separate pallets one by one from the stack of pallets and feed them to the next technological process.

Option to also place pallets one by one in a stack.

## Main benefits

- Increased pallet stacking capacity - up to 16 pallets.
- Raised stack safety boards.
- Easy to integrate in different layouts.
- Adjustable pallet dispensing directions.
- Stainless steel version with Hygienic design.
- Speed up to 360 pallets / h.

## Operating principle

1. Forklift brings a stack of pallets.
2. A pneumatically operated lifting mechanism separates the pallets.
3. And feeds them one by one to the dispensing exit.

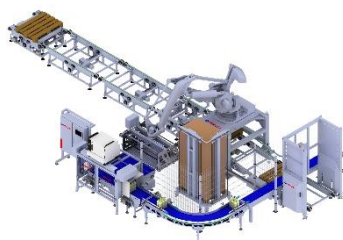

\*Equipment is adaptable to various size and weight dimensions

## Technical characteristics

|                                      |   |
|--------------------------------------|---|
| <b>Maximum payload</b>               | Standard up to 700 kg, reinforced up to 1400 kg                 |
| <b>Capacity</b>                      | Up to 16 pallets  |
| <b>Speed</b>                         | 360 pallets / h   |
| <b>Material used in construction</b> | Powder coated steel or Stainless steel (AISI 304)               |
| <b>Pallet type</b>                   | Pallet 800 x 1200 mm (EUR-EPAL),<br>Pallet 1000 x 1200 mm (FIN) |
